PROFESSIONAL SUMMARY

B.Tech Computer Science student building and deploying real AI systems. Shipped SentinelAI, a production LLM monitoring platform, and a fine-tuned NLP model for legal contract risk analysis. Contributed a merged fix to an open-source CLI tool. Solving DSA problems consistently to build strong fundamentals alongside project work.

TECHNICAL SKILLS

Languages: Python, C++, C, HTML/CSS

ML / AI: scikit-learn, Hugging Face Transformers (DistilBERT fine-tuning), TF-IDF & Cosine Similarity, Isolation Forest, Statistical Process Control (CUSUM), NumPy, Pandas

Backend & Infra: FastAPI, REST APIs, PostgreSQL (Supabase), API-Key Auth, Slack Webhooks, Render, Groq API (Llama 3.3 70B)

Tools & Practices: Git, GitHub, Streamlit, Matplotlib/Seaborn, Jupyter Notebook, VS Code, OOP, Data Structures & Algorithms

PROJECTS

SentinelAI — Production LLM Quality Monitoring System

June 2026

Python · FastAPI · scikit-learn · Streamlit · Supabase (PostgreSQL) · Render · Slack Webhooks | Dashboard: [sentinelai24455.streamlit.app](#)

- Built an **end-to-end system** that detects **LLM response quality degradation in real time**, addressing a gap most teams shipping AI chatbots have: no visibility into what the model is actually saying to users in production.
- Designed a **three-signal detection engine** — **TF-IDF cosine similarity** for semantic drift, **Isolation Forest** for anomaly detection, and a **CUSUM statistical control algorithm** for gradual quality decay — to catch failure modes a single metric would miss.
- Engineered a **multi-tenant FastAPI backend** with **API-key authentication** and per-company automatic baseline generation from live usage data, so each tenant's "normal" is learned rather than hardcoded.
- Implemented a **50-sample warmup phase** before detection activates, reducing false positives from insufficient baseline data during cold starts.
- Deployed a **Streamlit monitoring dashboard** and **Slack alerting pipeline** that notifies teams of quality degradation **within 60 seconds** of detection, and persisted all monitoring data in a **Supabase PostgreSQL** instance.
- Owns the **full lifecycle** — architecture, ML pipeline, backend, deployment, and monitoring UI — and can walk through every module (embeddings, drift detection, alerting) in technical depth.

Contract Risk Analyzer — NLP-Based Legal Contract Review Tool

August 2026

Python · Hugging Face Transformers (DistilBERT) · Groq API (Llama 3.3 70B) · Streamlit | Dashboard: [contract-risk-analyzer23.streamlit.app](#)

- Fine-tuned a **DistilBERT model** on the CUAD (Contract Understanding Atticus Dataset) to automatically flag and classify clauses across **34 legal risk categories**, reaching **~75% classification accuracy**.
- Integrated **Groq's Llama 3.3 70B** to convert flagged clauses into **plain-English risk explanations**, so non-lawyers can understand what a contract actually commits them to without reading dense legal text.
- Built a **Streamlit frontend** where a user uploads a contract and gets clause-level risk flags with explanations in one pass, turning a multi-step NLP pipeline into a single usable tool.
- Handled the **full pipeline solo** — dataset preprocessing, model fine-tuning and evaluation, LLM prompt design for explanations, and frontend integration.

OPEN SOURCE CONTRIBUTION

Merged PR — [arkorlab/arkor](#) | [View PR](#)

- Diagnosed and fixed a **port-fallback bug** in the `arkor dev` CLI command, then took the fix through **multiple rounds of maintainer code review** before it was merged into the main project.

EDUCATION

University of Lucknow

B.Tech in Computer Science and Engineering

SGPA: 7.1 / 10.0 (First Year)

Lucknow, India

Expected May 2029

Dron Public School

Class XII, CBSE

Percentage: 90%

Meerut, India

2023 – 2024

Dron Public School

Class X, CBSE

Percentage: 94.8%

Meerut, India

2021 – 2022

ACHIEVEMENTS & WRITING

- Maintaining a **100+ day coding streak** on LeetCode while solving **150+ Data Structures & Algorithms problems**.
- Awarded the **Infosys STEM Stars Scholarship (2025–2026)**.
- Google Cloud Certificate:** Introduction to Generative AI.
- Writes in public about ML/AI projects and lessons learned — **technical breakdowns and build logs** on [X](#) and [Medium](#), followed by **5,000+ people** across platforms.
